

# HOPE FOR A NEW GENERATION

A LEGACY OF LIFE & LOVE REPORT SERIES

**Over 2,750 pregnancy resource centers (PRCs) in the U.S. served families with material goods and services valued at <sup>\*</sup>\$367 million in 2022.**

- The estimated total value of goods and services provided by PRCs (incl. ultrasounds, education, health care, diapers, baby formula, and much more) was \$367,896,513, an over \$100 million increase since 2019.
- The total number of both in-person and virtual client sessions was 16,050,312.
- More than 8 in 10 PRCs are providing medical services.
- 97.4% of pregnancy center clients reported a positive experience/satisfaction.

**Between 2019 and 2022, there were notable percent increases at PRCs:**

- +41% growth in attendees for parenting and prenatal education programs
- +27% jump in STD/STI tests provided
- +194% increase in material services/baby items delivered (two previously unreported categories, new cribs and infant formula, were included in this report)

**There are over 60,000 paid and volunteer staff working at PRCs nationwide.**

- Over 10,000 medical professionals serve families.
- 27% (4,779) of paid staff were licensed medical staff and 12% (5,396) of volunteers were licensed medical volunteers.
- Between 2019 and 2022, there was an 18% increase in the number of paid staff at pregnancy centers and a 26% increase in the number of paid medical staff.

*\*Some results are updated from the December 2023 release, as new data was received in early 2024.*

## The estimated total value of free health care, education, support services and items provided by PRCs surpassed \$360 million.

- \* Free medical services had an estimated value of \$175,960,392
- 881 centers reported serving a total of 17,696 women after they took abortion drugs.
- The following health care services continue to grow: lactation/breastfeeding consultations, STI testing and treatment, and fertility awareness-based methods.
- Free education and support services had an estimated value of \$113,355,994.
- 409,409 moms and dads attended prenatal and parenting education programs, at an est. value of \$76,002,687.
- The distribution of free material resource items to 808,737 people had an estimated value of \$78,580,127.

*\*a fraction of centers charge a low fee for STI testing*

## Maternity homes have nearly doubled in four years.

- The number of PRCs operating a maternity home almost doubled from 24 to 46 between 2019-23, according to the Maternity Housing Coalition.
- In 2023, an additional 35 start-up homes have been recorded by MHC at PRCs.

## More women have access to Abortion Pill Reversal (APR) to continue their pregnancies after taking the abortion drug, mifepristone.

A medical provider will prescribe APR, which is natural progesterone, to reverse the effects of mifepristone which blocks progesterone. Considering progesterone has been used to support healthy pregnancies since the 1950s, APR is a **safe, effective** protocol which has given women a chance to continue their pregnancies.

- APR saved over 5,000 children's lives after mothers regretted taking the abortion drug between 2012-23, according to the Abortion Pill Rescue Network.
- There was a 142% increase in PRCs providing and overseeing the APR protocol and providing resources and support for women following drug-induced abortions between 2019-22.
